

Name _____ Class _____ Date _____

1 _____ is the process of water reaching a certain temperature and changing from gas to liquid form.

- A Evaporation
- B Precipitation
- C Reduction
- D Condensation

3 The earth's atmosphere is made up of _____ nitrogen gas.

- A 21%
- B 1%
- C 3%
- D 78%

2 A waste that is created by animals is _____, while plants create _____.

- A oxygen, carbon dioxide
- B carbon dioxide, oxygen
- C energy, soil
- D soil, energy

4 What is nitrogen fixation?

- A when nitrogen is in its gas form
- B when nitrogen is in the atmosphere as a gas
- C when nitrogen combines with other elements

8 _____ vines and smaller trees
B at ground level where life is most abundant
C within the soil of the rain forests floor
D at the top and is made up of tall trees

- A warm, warm
- B cold, hot
- C hot, cold
- D hot, warm

9 The grassland biome is an ecosystem that receives between 0 and 25 centimeters of rain per year.

- A true
- B false

10 A savanna is _____.

- A a grassland located near the earth's poles
- B a desert located in between the poles and the equator
- C a grassland located near the equator
- D a grassland that receives over 500 centimeters of water per year

ANSWER KEY

_____ is the process of water reaching a certain temperature and changing from gas to liquid form.

- A Evaporation
- B Precipitation
- C Reduction
- D Condensation

(d)

A **waste** that is created by **animals** is _____, while **plants** create _____.

- A oxygen, carbon dioxide
- B carbon dioxide, oxygen
- C energy, soil
- D soil, energy

(b)

The **earth's atmosphere** is made up of _____ **nitrogen gas**.

- A 21%
- B 1%
- C 3%
- D 78%

(d)

What is **nitrogen fixation**?

- A when nitrogen is in its gas form
- B when nitrogen is in the atmosphere as a gas
- C when nitrogen combines with other elements
- D when nitrogen is decomposed into

(c)
