

Name _____ Class _____ Date _____

Read the passage below. For each inference, circle TRUE or FALSE. Then, on the lines provided, defend your answer.

Wonderful, Weird Bamboo

Bamboo is the tallest member of the grass family. It grows faster than any other plant on Earth. It can grow almost 3 feet in a single day and reach its full height of 93 feet in just four months! Although bamboo is a grass, it has a woody stem. And it's so tall that it looks like a thin tree. Different kinds of bamboo grow on every continent but Antarctica.

Bamboo must flower to produce seeds. But bamboo is very strange. It may not flower for 120 years! No one knows what causes it to flower. Flowering bamboo is a big problem. All the bamboo plants in the forest flower at once. Animals that eat bamboo will not eat it once it flowers. At that point, it has no nutrients. When the

3. Bamboo plants produce seeds every five years. TRUE FALSE

Bamboo may not flower for 120 years.

4. Bamboo grows in Europe. TRUE FALSE

Different kinds of bamboo grow on every continent except Antarctica.

5. Why do wild pandas die when a bamboo forest flowers?

A bamboo forest dies after it flowers, so the wild pandas die because bamboo is their food.
