

SOLIDS AND FACES

What are Solids and Faces of an Object?

You can use solid shapes to help describe real-world objects. These shapes have surfaces called faces.

How to determine solid shapes:

Three dimensional shapes have length, width, and height. They differ in the number of faces, edges, and angles.

Shape	Name	faces

A **Face** is a flat surface.

A **Corner** is where two edges come together.

An **Edge** is the line formed where two faces come together.

Try This!

Name the shape.
