## FINDING VOLUME

Volume measures the amount a solid figure can hold. Volume is measured in terms of units ${ }^{3}$ and can be measured in inches, feet, meters, centimeters, and millimeters.

- The formula for the volume of a rectangular prism is $V=1 \cdot w$. $h$, where $l$ is the length, $w$ is the width, and $h$ is the height.
- The formula for the volume of a cube is $V=s^{3}$, where $s$ is a side of the square.
- 

- The volume of a sphere is $V=(4 / 3) \pi r^{3}$, where $r$ is the radius and $n$ is 3.14 .
- The figures of prisms, cylinders, pyramids, cones and spheres are all 3-D figures. The 3-D figures are made up of edges, faces and vertices. The edge is where two faces meet. The face is the side of the figure. The vertex is the point where the edges meet.

## How to use finding volume

The volume of 3-D figures can be determined by using the formula that corresponds to the figure. The volumes of all figures can be determined as long as the needed information is given.

- For example, what is the volume of a cone with a radius of 6 cm and a height of 15 cm ?

$$
\begin{aligned}
\text { Ex. } \mathbf{V}_{\text {cone }} & =(1 / 3) \boldsymbol{n} \mathbf{r}^{2} \cdot \mathbf{h} \\
& =(1 / 3)(3.14)\left(6^{2}\right)(15) \\
\mathbf{V}_{\text {cone }} & =(1 / 3)(3.14)(36)(15)=565.2 \mathrm{~cm}^{3}
\end{aligned}
$$

The radius of the sphere is approximately 2 m . A 3-D figure is made up of faces, edges and vertices. A rectangular prism has 6 faces, 12 edges and 8 vertices.

## Try This!

1. What is the volume of the rectangular prism with a length of 3 m , a width of 5 m and a height of 11 m ? $V=1 \cdot \mathrm{w} \cdot \mathrm{h}$
2. What is the volume of a triangular prism with a length of 6 cm , a width of 7 cm and a height of 2 cm ? $V=(1 / 2) \cdot \mid \cdot \mathrm{w} \cdot \mathrm{h}$
3. What is the volume of a cylinder with a radius of 4 ft and a height of 9 ft ? $\quad V=\pi r^{2} \cdot \mathrm{~h}$
4. 

7. If the volume of a rectangular prism is $288 \mathrm{~cm}^{3}$ and the length is 9 cm and the width is 8 cm , what is the height? $\mathrm{V}=\mathrm{l} \cdot \mathrm{w} \cdot \mathrm{h}$
8. If the volume of a triangular prism is $81 \mathrm{ft}^{3}$ and the width is 6 ft and the height is 3 ft , what is the length? $\mathrm{V}=(1 / 2) \cdot l \cdot \mathrm{w} \cdot \mathrm{h}$
9. If the volume of a cylinder is $1230.88 \mathrm{~m}^{3}$ and the radius is 7 m , what is the height? $V=\pi r^{2} \cdot h$
10. If the volume of a pyramid is $125 \mathrm{~cm}^{3}$ and the height is 15 cm , what is the radius? $V=(1 / 3) b^{2} \cdot h$
11. If the volume of a cone is 1780.38 in. ${ }^{3}$ and the radius is 9 in ., what is the height? $V=(1 / 3) \pi r^{2} \cdot h$
12. If the volume of a sphere is 113.04 ft , what is the radius?
$V=(4 / 3) \pi r^{3}$
13.
14.
