How

A plant begins as a seed. A seed has a tiny plant inside of it!

- A seed comes from an adult plant.
- A seed falls to the ground.
- Once in the ground, a seed begins to grow in the soil.
- Roots grow from a seed down into the ground.
- A young plant grows up through the soil.
- Soon the young plant grows into an adult plant.

plant needs water to live.

### Stem

- The stem on a plant brings the water from the roots to the rest of the plant, like a straw.
- The stem also helps the plant stand up straight so it can reach the sunlight.

Lea
