

LAND, WATER AND AIR

What Makes Up the Earth?

Earth is made of land, water, and air.
Earth has more water than land.

and

Weathering can change a rock from being rough to being smooth.

Erosion can also change land.
Erosion is when water and wind move rocks and soil.

For example, erosion can make a beach smaller. Wind and water can move sand away from a beach.

Plants use water to grow.

There are two kinds of water found on Earth: **saltwater and freshwater**. Animals and people need to drink freshwater in order to live. We can't drink saltwater.

Oceans are made up of saltwater.

Many animals live in saltwater in the ocean.
